Hyderabad, Mansoorabad Telangana - 500068, India

OBJECTIVE

I am looking for an opportunity in an organization which can provide me ample of scope to utilize my skills and knowledge as well as personal attributes to achieve the organization goals.

EXPERIENCE

Raynx Systems Private Limited *August 2025- May 2026*

- Working as a Java Developer on backend application development.
- Developed multiple modules using **Core Java**, **OOP concepts**, **Collections**, and **JDBC**.
- Implemented database connectivity and CRUD operations using **MySQL ,postgresql**.
- Following best coding practices and improving code quality and performance.
- Worked on real time applications using **Hibernate** and **Spring Boot** for enterprise-level application development.

TRAINING INTERNSHIP

Nirman Organization *April 2025-June 2025*

- Worked as a Web Developer Trainee focusing on frontend development.
- Developed responsive web pages using HTML, CSS, JavaScript, and Bootstrap.
- Designed and built a personal portfolio website showcasing projects and skills.
- Gained hands-on experience in web design principles and responsive layouts.

EDUCATION

Sri Indu Institute Of Engineering and Technology *2021 - 2025*

B.Tech CSE Hyderabad, Telangana

∗ GPA: 7.20/10.00

PROJECTS

Customer Support Ticketing System *2025*

I developed the backend for a Customer Support Ticket Management System using Spring Boot and MySQL, aimed at streamlining customer service operations. The application allows customers to raise support tickets and track their issue status, while admins can assign tickets to support agents and monitor overall progress. Support agents are able to update ticket status, add comments, and resolve issues directly through the system. The backend includes secure role-based authentication, automatic ticket ID generation, and flexible search and filter functionality, along with support for real-time status updates to ensure smooth communication between all users

HRMS Portal (Human Resource Management System) *2025*

I developed the backend for a Human Resource Management System (HRMS) using Spring Boot and PSQL, designed to streamline and automate core HR operations. The system enables efficient management of employee records, attendance, payroll, and leave requests. It provides role-based access for administrators, HR personnel, and employees to ensure secure and organized workflows. Employees can apply for leave, view payslips, and update personal details, attendance, and payroll processing. The backend incorporates secure authentication, robust validation mechanisms, and RESTful APIs to ensure data integrity, scalability, and seamless communication between system components.

Real Estate Management System *2026*

I developed the backend for a Real Estate Management System using Spring Boot and PostgreSQL, designed to simplify property listing and management processes. The application enables users to browse, search, and filter properties based on various criteria such as location, price, and property type. Property owners and agents can add, update, and manage property listings, including images and detailed descriptions. The system incorporates robust validation mechanisms to ensure data integrity and accuracy. Additionally, it features secure role-based authentication, efficient CRUD operations, and advanced search functionality to enhance user experience and streamline real estate operations.

SKILLS

- **Languages & FrameWorks:** JAVA, Spring Boot, Hibernate, JPA, Spring Security
- **Web Technologies:** HTML 5, CSS 3, Javascript
- **Database Systems:** Mysql, Postgresql
- **Tools:** Intelij, VS Code, Postman
- **Key Strength:** Leadership, Problem-solving, Time Management, Adaptability

CERTIFICATIONS

- Full Stack JavaScript Development from Nirman Organization *2025*
